

MIRROSMART

OPERATING INSTRUCTIONS

All our mirrors have a shaver socket*, de-mist function and LED lights as standard

Depending on the mirror you have purchased, additional functions may be included such as LED Clock and Smart Technology.

*Except Hollywood & Round Mirror Ranges.

DIAGRAM

LED LIGHTS

The LED lights are switched on and off by the sensor switch underneath the mirror (see figure 4). To turn the lights on, just pass your hand within 80mm of the sensor. To turn the lights off, repeat the process.

If you prefer the mirror LED lights to turn on and off with your bathroom ceiling lights, this can be achieved very simply and involves by-passing the sensor but it is best performed by a qualified electrician. Remember, if you bypass the sensor and want the shaver socket to operate after you have turned the ceiling lights off, you will need an extra wire at the mirror. Your electrician will advise you.

Figure 4

DE-MIST FUNCTION

Each mirror has a de-mist function. This is activated each time the mirror lights are turned on. When the lights are turned off, the de-mist pad turns off as well.

SHAVER POINT

The shaver point has an isolating transformer connected to it, ensuring your safety when you use it for a tooth brush charger or shaver etc. The spring loaded cover conveniently covers the outlet when not in use. In order to activate the shaver socket, the water proof switch above it must be switched on first (see figure 5). Please not on the "Italia" range, the shaver socket & switch are on the bottom edge of the mirror

Figure 5

LCD CLOCK

The LED clock is an optional extra on some mirrors. It is adjusted by the small black button located on the bottom edge of the mirror to the left of the sensor switch (see figure 6). To adjust the clock press and hold the black button shown in Figure 6. When the hours digits begin to flash, release the button and then press again to increment the hours. To adjust the minutes, repeat the process.

Figure 6

SMART TECHNOLOGY

The Smart Technology function is an optional extra on some mirrors. It allows you to connect your smart phone to the mirror and play your favourite music through the in built speakers.

The Smart Technology is only functional when the touch sensor is activated and the lights are on. When you activate the sensor switch, you will hear an audible tone. Enable the Bluetooth function on your smart phone and pairing mode will begin.

When your smart phone displays a pairing code (see pairing code list), select this and type in the corresponding password to connect it successfully to the mirror speakers. An audible tone will be heard to confirm the connection has been made. You can now play your favourite music through the mirror.

If, during playback, the smart phone receives an incoming call, the device will automatically pause the music and switch to general call phone mode. Please note when this happens, the music will pause but the voice call will not play through the mirror speakers. After the incoming call is terminated, the music will continue.

When you want to disconnect from the mirror, just turn the Bluetooth off on your phone. A sound will be heard signalling the Bluetooth connection has been broken. If you do not disconnect from the Bluetooth connection and walk out of range the connection will be lost and may need re pairing when you walk back in. Alternatively you can switch the mirror lights off. It is normal that the mirrors Bluetooth device issues a sound when the pairing is connected or disconnected.

Please note: When the Bluetooth function is enabled and in use on your phone and WiFi is being used to listen to music on line, this may cause intermittent playback problems due to the slow down load speed. Songs and content pre-installed on your phone should play back perfectly fine.

PAIRING CODES

HOLLYWOOD MIRRORS

There are two Hollywood mirrors in our range. The AMALFI and the LOS ANGELES.

AMALFI

This mirror is designed for both table top mounting and wall mounting and has a dimmer switch on the right hand side that allows you to adjust the intensity of the LED light bulbs.

When the AMALFI mirror arrives in the packaging, it is not assembled for table top use. Please see figure 7 showing the three main parts that make the mirror in to a table top mirror.

Please note this mirror is not suitable for placement in a bathroom. Make sure you protect the mirror with a soft cloth prior to assembly of the stand to avoid damage.

Figure 7

Fasten item 2 and 3 together using the four 44mm screws and washers provided. This creates the stand for the mirror.

Fasten the stand to the mirror using the two remaining 44mm screws and washers in to the base and the two 35mm screws in to the back of the mirror. Do not over tighten.

LOS ANGELES

This mirror can only be wall mounted. It has a dimmer switch on the righthand side that allows you to adjust the intensity of the LED bulbs.

WALL CABINETS

There are two wall cabinets in our range. The HONDURAS and the MONACO.

Both cabinets have adjustable shelves. The shaver point is conveniently placed inside the cabinet allowing the user to charge electric tooth brushes etc, whilst the cabinet doors are closed (see figure 8). The shaver point is activated by turning on the switch adjacent to it. The de-mist function is activated each time the mirror lights are turned on.
